mE-DIA

Multi-enzyme DIA in a single injection: library-free, proteoform-aware

1 Digest in parallel, mix, measure once, de-multiplex in silico

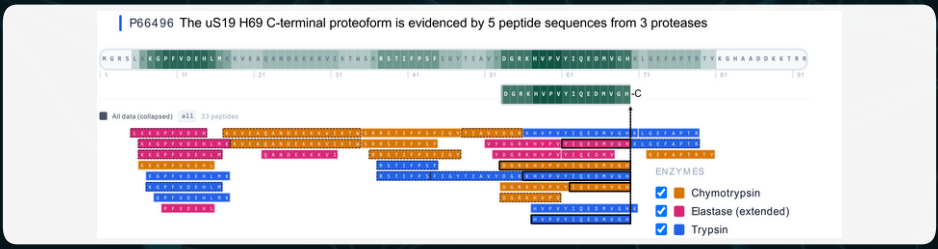

2 One multiplex injection vs separate single-enzyme analyses

S. pyogenes; each bar 4 h of instrument time (2 replicates); peptides in both replicates, 1 % FDR; candidate proteoforms ISD-filtered

3 Find proteoforms: a C-terminal form of ribosomal protein uS19 ending at H69

Open source: mE-DIA Pipeline GUI + Peptide Mapper
